TORONTO, CANADA – (October 23, 2008) – Sangoma Technologies Corporation (TSXV: STC), the premium provider of software centric media and signal processing hardware, today announced it has partnered with 3CX, an award-winning SIP-based PBX provider.

The technology partnership will ensure interoperability of 3CX Phone System Version 7.0 for Windows with Sangoma NetBorder Express gateway cards. Through this alliance, 3CX will be able to provide businesses with the option of running their PBX application on a server that has an internally or remotely deployed gateway.

“3CX is completely based on the SIP standard, so providing support for Sangoma’s NetBorder Express Gateway was the natural next step in our product’s development,” said Nick Galea, CEO at 3CX.

“We are pleased to have 3CX as a technology partner, as demand for NetBorder Express grows,” said Frederic Dickey, Director of Product Management for the NetBorder product line.

For 3CX, the partnership enables them to execute a key company strategy: To offer an innovative SIP and PSTN-based IP PBX that can deliver a robust level of functionality at a very affordable price for small- and medium-sized businesses.

“The offer of 3CX Phone System with Sangoma Gateway Cards delivers a software-based IP PBX that is simple to install, configure, and manage, with advanced VoIP features such as low call costs and integration with business applications,” said Galea. “This helps our mutual customers increase productivity, reduce their telecommunication costs, and boost their profit margins.”

The Sangoma gateway solution is seamlessly integrated with 3CX, ensuring an easy, user friendly implementation.

### About Sangoma Technologies Corporation

Sangoma is the premium provider of software-centric media and signal processing hardware. The company develops and manufactures the most scalable and reliable voice and Wide Area Network data cards in the industry, including the award-winning Advanced Flexible Telecommunications (AFT) product line. By offering the building blocks for all processing in any architecture, Sangoma gateways are tightly integrated and easily scalable. The result is a comprehensive toolset for creating cost-effective, powerful, and flexible solutions.

Founded in 1984, Sangoma Technologies Corporation is publicly traded on the TSX Venture Exchange (TSX VENTURE:STC). Additional information on Sangoma can be found at: [www.sangoma.com](http://www.sangoma.com).
