Press release from: [Winzero Technologies Inc](#)

Ottawa, Canada – Dec 18, 2008 -- Winzero Technologies, a leading developer of Microsoft Windows management and migration software, today announced ServerMigrator version 6.00 with support for both physical and virtual Windows servers including Microsoft Hyper-V , enabling enterprises to easily migrate or consolidating Windows data while maintaining security permissions and online user access.

With the growing need to consolidate massive amounts of data, IT departments have been turning to virtualized file storage systems like Microsoft Windows Server 2008 with Hyper-V and VM Ware. ServerMigrator makes it easy to migrate physical server data from many sources and consolidate data storage without time-consuming and technically cumbersome processes.

"ServerMigrator automates the task of consolidating and migrating servers without losing permissions or taking data off-line. Since its release, customers involved with server migration projects, have been asking for a version that specifically allows them to move users, passwords, groups and data to Virtual Storage Servers," said Akos Sandor, new CEO at Winzero. "Today, we are pleased to announce ServerMigrator v6.00 which addresses this need and is a result of custom development by Winzero for government agency."

"Customers deploying Microsoft Hyper-V solutions will benefit greatly from the improved data availability and automated preservation of security settings that ServerMigrator offers," said Diane Merasty, senior director of product research at Winzero. "By combining customer requests and Winzero development efforts, we now provide a solution to our customers that make data consolidation and server migration painless with decreased network costs."

New ServerMigrator features allow administrators to:

- Migrate data to physical and virtual servers;
- Grant users normal access to information throughout the process;
- Maintain data security permissions throughout the migration;
- Convert local user and group accounts to domain accounts;
- Ensure that the migration is transparent to end users.

About Winzero

Winzero Technologies is a leading provider of Microsoft Windows migration and management software worldwide, enabling customers to centralize and reduce repetitive administration, migration and ongoing day to day Windows management tasks while benefitting from reduced risk and improved operational efficiencies.
