

New: Belt conveyor for wafers

Date: 01-09-2009 01:59 PM CET

Category: [Logistics & Transport](#)

Press release from: [Montech AG](#)

The Swiss company Montech AG has developed a belt conveyor for wafers specifically designed for the solar industry: With the new conveyor, the manufacturers of turnkey plants for the solar industry and equipment for the processing of wafers or solar cells can carry these delicate parts in their plants.

The belt conveyor for wafers consists of a supporting frame and two belts driven in synchronous mode. Possible wafer debris can be discharged through the open gap between the two belts.

Adapting to requirements

Thanks to its modular concept, the belt conveyor can be tailored to the specific needs of each user in terms of length and width. The conveyor structure can also be selected freely and adapted to each machine individually. Among the peculiarities of the wafer conveyor, the whole structure can be assembled and dismantled from above, and the belt itself can be replaced without disassembling the supporting frame.

No protruding elements

The wafer conveyor developed by Montech has no protruding parts that might interfere with transport. In this way, delicate wafers are carried with high accuracy and great care. Finally, the cost of spare parts is limited, as the belt conveyor consists of few components.

“With the belt conveyor for wafers, we have created a specific solution for the product and process needs of the solar industry”, said Gianluca Aloisi, Conveyors Division Manager, Montech AG. “As a belt conveyor specialist, we can provide our customers with a specific solution for their needs, allowing them to focus on their core expertise.”

Montech AG markets basic modular components that automate demanding production and logistics processes. In addition to conventional conveyor belts, automation components and the Quick-Set profile system, the range of products also includes the Montrac transport system. Montrac is an intelligent transport system for networking industrial production and logistics processes. Founded in 1963, the company is based in Switzerland and stands for innovation in the automation industry.
