Press release from: [Solix Technologies](#)

Santa Clara, Calif — (Feb.04, 2009) — Solix Technologies Inc., a leading provider of database archiving and secure test data management software, is pleased to announce the appointment of Mark Lee as the Sr. Vice President of Services. Mr. Lee will be spearheading Solix Technologies on-demand model. The on-demand model takes the Solix service offerings beyond product implementations to include a series of on-demand and application optimization services which leverage the Solix EDMS software to provide best in class data management that lower costs, improve performance, reduce risk and are tailored to any business need.

On-demand services will be provided to companies on a pay-per-use basis allowing them to reap the benefits of the Solix EDMS technology without requiring an up-front capital expenditure. Customers can combine the on-demand service with assistance from the Solix Services team to create a true managed service, allowing their staff to focus on other core activities.

Application optimization services will be provided to help companies optimize their existing application infrastructure investment by designing an appropriate data retention policy and corresponding application infrastructure. An application tuning and performance improvement service will also be offered. An ILM Impact Analysis service will be offered to help companies identify opportunities for improvement and to build the business case for change. "Customers are using our software to improve application performance, reduce storage and infrastructure costs, meet their long term data retention and compliance needs and reduce threats of internal breach on data security," stated Sai Gundavelli, Founder/CEO, Solix Technologies. "Being added to DLT's GSA schedule makes it easy for federal agencies to purchase our solutions from a trusted source."

"The challenging economic environment has put severe restriction upon both software investment and the resources to manage critical database management activities," said Sai Gundavelli, President and CEO of Solix Technologies, "providing our customers with managed services will give them an opportunity to meet their database challenges with minimal upfront investment."

Mr. Lee is a senior technology executive with more than 25 years of experience with a successful track record of enterprise application implementations and business transformations. Prior to joining Solix, he worked as Sr. Vice President at BearingPoint where he led their Enterprise Applications practice. During his tenure at BearingPoint, he pioneered the effort to develop a rapid implementation methodology for ERP applications that was widely adopted in the industry. Prior to BearingPoint, he served as Director of Information Technology for a medical device manufacturing company where he led one of the very first implementations of the Oracle E-Business Applications.

In his new role, Mr. Lee will be responsible for the Solix Services organization offering managed services, application optimization services, and product implementations. He will also be working with Solix service partners to expand the reach of these services.

"This is a win-win for our customers," said Lee. "Using an on-demand model allows our customers to get the benefits of Information Lifecycle management without requiring an up-front capital investment."

With Solix Enterprise Data Management On-Demand Services, companies can:

- * Improve the performance of their applications
- * Improve the efficiency of the data management function
- * Reduce their overall storage costs and secure sensitive data
- * Improve the efficiency of their test and development teams
- * Enable compliance and E-Discovery through long term data retention, data masking, database audit and enterprise search.
