EXASOL and Intel publish joint white paper

Nuremberg, February 09, 2009 – EXASOL, the leading vendor of a high-performance database management system for precise data analysis, and Intel, the world leader in the field of semiconductor innovation, announce the publication of a joint white paper on the subject of performance optimization.

EXASolution is a flexibly scaling in-memory cluster database management system that dramatically expands the possible uses of common business intelligence applications for very large volumes of data. Thanks to innovative technologies, BI analyses can be conducted up to 100 times more quickly than with conventional databases. That enables users to evaluate large quantities of data and complex analyses in real time.

“Thanks to Intel’s Trace Analyzer and Collector tool, EXASOL can shorten development cycles and simplify software tuning,” says Mathias Golombek, Head of R&D at EXASOL.

“EXASolution is an excellent solution for demanding business intelligence and data-warehousing requirements. Utilizing advanced hardware and software clustering technologies, it is able to handle a large amount of data for business critical operations. With the help of the Intel’s Clustering Tools EXASOL was able to enhance their solution even further and demonstrate leadership in the area of scalable, fast and high throughput data-mining and data-base management,” says Dr. Herbert Cornelius, Director Advanced Computing Center EMEA, Intel.

You can now download the new white paper “Performance Optimization of EXASolution with the Intel® Trace Analyzer and Collector Tool” from [www.exasol.com/whitepaper.html?&L=1](http://www.exasol.com/whitepaper.html?&L=1).

### About Intel

Intel (NASDAQ: INTC), the world leader in silicon innovation, develops technologies, products and initiatives to continually advance how people work and live.

Additional information about Intel is available at [www.intel.com/pressroom](http://www.intel.com/pressroom) and [blogs.intel.com](http://blogs.intel.com)

### About EXASOL AG

EXASOL AG is a leading provider of next generation database management systems (DBMS) for high performance data research and analysis. Thanks to its optimum support of complex utilization profiles, the company's DBMS can be used in all areas for enterprise data warehouse applications. EXASOL customers gain a decisive competitive advantage through a high performance DBMS for data analysis and decision support at optimal TCO. In 2004, EXASOL was awarded the prestigious European IST Prize for its powerful product. Currently, EXASOL is the multiple record-setter in the international TPCTM-H benchmark category, which is recognized around the world as the performance test for data warehouse solutions.
