Press release from: [Net Business International](#)

SEORulebook can help your website follow the complex and changing search engine algorithms at a blink of an eye. Best of all -- the software is completely Automatic. - The summary should arouse curiosity in the reader to read the rest of your press release. It is very important to make it interesting and not dull.

Being on top of the search engines means big business when it comes to Internet marketing. How to get on the top is a whole new story. Many people fail to understand onsite optimization in the SEO formula. To reach the top you must do more than just build incoming links and create more pages.

Keyword density plays an important and vital role to reaching the top. You always hear individuals saying "pick your keywords wisely" and "keywords are very important". Let me take a minute and teach you what they are talking about but first let me get you caught up to date about current keyword technology.

Things To Know And Remember

1. Search Engines No Longer Use Keyword Meta Tags
2. You No Longer Submit Your Keywords To The Search Engines For Ranking

Search engines use Keyword Density to determine your websites keywords. Keyword density is the number of times a specific keyword appears within your site.

If you have 100 words on your website and the word "mortgage" appears 4 times then you would have a keyword density of 4% for the keyword mortgage.

The most important keywords on your website are the Top 5 words with the highest density on each individual page as well as a collective summary of every website on the domain.

Things To Know And Remember

1. SEO Rulebook solves your keyword density issues.
 2. Keyword density should fall between 3% to 4.5% per keyword.
 3. The Top 5 Keywords are very important to your SEO efforts.
 4. Your targeted keywords must be bolded or 'tagged' for the most ranking benefit.
 5. Each individual page must have an optimized title that matches its keyword density.
 6. Each title must meet specific length critical which Rulebook manages.
 7. Each title must contain the targeted keyword.
 8. Titles can contain no words in ALL CAPITAL LETTERS.
- * Rules & Concepts According to SEO Professionals

Rulebook Saves Time & Does The Impossible

Imagine having to rewrite your website using all of these fundamental rules. Bolding every keyword. Rewriting your content until your targeted keywords have between 3% and 4.5% density each. Calculating page density to determine the best TITLE to use on every single webpage.

SEO Rulebook solves all of these problems for you at a click of a button - instantly. Even if you do it by hand you are bound to look over keywords to bold and make human errors while Rulebook is analytically perfect.
