Press release from: [Shuttle Computer Handels GmbH](#)

New Heatpipe-Cooling Technology with Vapor-Chamber / SX58H7 for the first time with 500 Watt power supply

Shuttle Inc., the market leader in the Mini-PC segment and manufacturer of Multi-Form-Factor solutions today announces a new model for Intel Core i7 processors based on the socket 1366. The Shuttle XPC Barebone SX58H7 uses the high-performance Intel X58 Express chipset with ICH10R Southbridge.

This new flagship targets gamers and enthusiasts and thus spearheads Shuttle's squad of high-performance Mini-PCs. Its highly polished surfaces and high-quality finishes measure only 32.5 x 20.8 x 19 cm (LWH) in size.

Two PCI-Express 2.0 x16 slots can take up to two graphics cards in a single-slot design or a dual-slot graphics card. With a maximum of 16 GB DDR3 Memory in Triple-Channel Mode (3+1), distributed over four memory banks, this barebones PC is a match for the most resource-hungry applications. The aluminium case can house up to two hard disks to run in Serial-ATA-II Raid mode. Maximum accessibility is guaranteed through two Gigabit network interfaces with load balancing and failover-function.

"Applications from the professional sector and even brand-new games do not present any problem at all for the XPC Barebone SX58H7," says Tom Seiffert, Head of Marketing & PR at Shuttle Computer Handels GmbH. "The Vapor-Chamber technology used for the first time in the new 'I.C. Evo'-Heatpipe increases the effectiveness of the cooling system while reducing noise development at the same time."

Shuttle's new high-performance cube is driven by a 500 Watt power supply with "80-PLUS-Bronze" certification. The sole use of long-life solid capacitors ensures highest reliability even under load.

The Shuttle XPC Barebone SX58H7 will be available in the end of Q1/2009. Shuttle's recommended retail price is EUR 483 (ex VAT). Suppliers can be found on the European Shuttle website via the "Shuttle StoreLocator" www.shuttle.eu/buy.

Shuttle Inc, founded in Taiwan in 1983, is specialised in development and production of innovative mini PCs. The joint-stock company is represented worldwide by a network of branch offices in Germany, the US and Japan. Since 2001 the attractive cube-shaped PCs have conquered nearly any field of application and have become the core business of the company headquartered in Taipei / Taiwan. Widely acclaimed by customers and press across the globe, Shuttle founds its success on effective management and long-term experience in making mainboards of highest quality standards. Since years Shuttle's mini PC barebones and fully-configured systems are the first choice of many system integrators, VARs, OEMs and ODMs banking on the high reliability and build quality. With appealing mini PC solutions Shuttle meets the requirements of consumers excellently and seeks to provide further user-friendly solutions of consumer electronics for the digital home environment.
