

Opensource Box Shot Making Software Produces Satisfactory Images

Date: 03-26-2009 07:39 PM CET

Category: [IT, New Media & Software](#)

Press release from: [ConnectCode Pte Ltd](#)

ConnectCode is pleased to announce the release of ConnectCode Software Box Shot Maker, an open source project for producing for 3D images of software boxes.

It works by taking in two to three images comprising the sides of the box, and building a 3D scene automatically from them into a realistic picture of the software box.

The quality of the results is almost comparable to commercially produced ones. Basic features like box orientation, box size and camera position are merged into a slider-based user interface dialog to provide an easily adjustable preview.

The opensource nature of the tool gives anyone interested in writing or extending a box shot making software an opportunity to create their own custom box shots using more advanced algorithms.

The source code for ConnectCode Software Box Shot Maker is licensed under the simplified BSD (Berkeley Software Distribution) license.
