Press release from: [Grid-Tools Limited](#)

Oxford, UK - Grid-Tools Limited, the premiere vendor of test data management, data generation, database subsetting and data obfuscation software is pleased to announce a closer working partnership with Quasus, Belgium's leading testing and business consultancy provider. The mutual partnership will enable Quasus to sell the Grid-Tools toolset and Quasus consultants will be trained and certified in Grid-Tools solutions.

Offering multiple methods for managing data

As accredited suppliers of Grid Tools' highly acclaimed test data generation tool, Datamaker, Quasus will be able to offer its customers the ability to manage and generate data for testing and development in multiple ways. The Datamaker solution offers three ways to generate and manage data; database subsetting, data obfuscation and synthetic data generation. Companies can now look to Quasus to provide solutions to reduce storage costs, protect sensitive records whilst maintaining referential integrity, accurate test data, improving the quality of their IT tests and performance of their applications.

Grid-Tools Managing Director, Huw Price, commented on his confidence in the relationship saying, "The Grid-Tools Quasus partnership will complement the expertise each company has in providing quality test data and complete testing solutions like database subsetting, data masking and data obfuscation. This will also help Grid-Tools exposure in Belgium and The Netherlands".

Quasus Delivery and Quality Director, Sebastiaan Passtoors, commented on the success of the partnership saying: "Given the years of experience Quasus has in testing and test automation, the partnership with Grid-Tools will allow Quasus to reach a new level of quality and service. As stated before, the complete testing solution can now be offered towards our customers."

About Grid-Tools Limited

Grid-Tools are specialists in data generation, test data management and information lifecycle management. Their experienced personnel have been writing and developing solutions for large companies in both the private and public sectors for nearly 30 years.

The Grid-Tools Datamaker Suite includes a wide range of tools for test data management including such innovative products as Datamaker, a revolutionary tool that creates and publishes quality test data with the referential integrity of production environments for testing and development. Datamaker offers three methods for managing and generating data in testing and development inclusive of database subsetting, data obfuscation (data masking and data compliance) and synthetic data generation.

Within a short span of time, Grid-Tools have picked up an impressive list of well known and respected customers and strategic partners world-wide with the most innovative test data management solutions.

The Grid-Tools methodology consists of using the "data-centric" approach to testing whereby their focus is to ensure the quality of the test data you are using is of the right quality for successful testing and maintaining data compliance standards. For more information visit: www.grid-tools.com

About Quasus

Quasus delivers flexible, tailored solutions to help prominent organisations optimise their quality and performance. The scope of specialised services ranges from treating small, isolated systems to complex, organisation-wide processes.
