

## iPhone Feeling for Windows Mobile Developers with Touch Controls Suite (C#/VB.NET)

Date: 04-30-2009 02:01 PM CET

Category: [IT, New Media & Software](#)

Press release from: [mirabyte GmbH & Co. KG](#)

mirabyte announces the immediate availability of Touch Controls 1.0, a new innovative component suite for developing Windows Mobile applications based on the .NET Compact Framework (NETCF) that support a finger-based user interface. This enables developers to easily create highly intuitive applications for Windows Mobile Smart Phones and PDAs.

One of the major disadvantages of the Windows Mobile operating system is the fact that the user interface controls (such as menus, buttons, lists, etc.) are not optimized for finger-based interaction and require the use of a stylus. Creating a finger-based UI requires a lot of technical knowledge. And due to performance issues, developers that write their applications on the easy to use .NETCF platform with languages such as C# or VB.NET are not able to instantly create modern looking applications that have a finger-based UI as previously seen on other platforms such as Apple iPhone.

mirabyte now offers a new control suite that gives developers the power to easily create stylus-free user interfaces: The core component of Touch Controls is "TochList", a flexible multipurpose list control that can be used for any kind of menus, lists or item viewers. The component also provides modern animation and transition effects which are powered by a kinetic scrolling engine that creates a realistic behavior of the UI. Apart from the TochList control, the suite also consists of additional panel controls that can be used to create multi-button menus or status indicators. All components are fully customizable concerning the look and feel and support alpha bitmaps for full skinning capabilities. The component suite is

constantly being enhanced with further features and components.

Recent Core Features:

- Create finger-based UI for Windows Mobile .NETCF (C#/VB.NET) applications
- Flexible and fully customizable list control for lists and menus
- Stunning animation effects for perfect user experience
- Kinetic scrolling for a realistic behavior of the controls
- Additional panel controls for intuitive multi-button UI

Pricing and Availability

The introductory price for a developer's license of Touch Controls is 39.95 EUR. Further controls are being added constantly to the suite. Additional information, a demo version and a demonstration video are available at [www.mirabyte.com/en/products/windows-mobile.html](http://www.mirabyte.com/en/products/windows-mobile.html).

About mirabyte:

mirabyte<sup>®</sup> is a privately held software development and consulting company founded in 2005. The main focus at mirabyte lies on developing powerful and easy to use software applications that allow the efficient use of today's Web technologies. In addition to that mirabyte also offers professional enterprise communication tools as well as innovative mobile solutions and components. Excellent product quality and a responsive support service are the distinguishing characteristics of mirabyte. The most popular products are the award-winning CD-ROM offline-content-solution Discstarter and several other innovative products like the RSS editor Feed Writer or the Screen Ticker application.
