May 5, 2009, Coral Springs, Florida – If you own a cell phone, you've probably experienced poor reception indoors. "Can you hear me now?", "What about now?" sounds familiar? CellAntenna Corp. is the worldwide provider of solutions that solve cell phone communication problems with building repeaters. CellAntenna's building repeater solutions make it possible to use cell phones indoors, even in the areas where the outdoor signal is weak. In addition, the amplifiers reduce the overall radiation produced by mobile phones.

CellAntenna's repeater solutions come in a wide-variety of pre-packaged and custom solutions, using FCC licensed amplifiers. They are compatible with all public safety frequencies and all cellular service providers. The pre-packaged DIY solutions range up to 50,000 square feet of coverage. For customers seeking solutions that go beyond 50,000 square feet and need multiple-floor distribution, CellAntenna will design and install custom building repeater system over a distributed antenna system (DAS), using the latest coaxial and fiber optic technology to ensure the best reception in every corner of the indicated area.

"Cell phones are already a part of everyday life, but unfortunately due to poor signal levels, they often don't work where and when we need them the most, at home and work," said CellAntenna CEO, Howard Melamed. "Our building repeater systems solve this problem and make the cell phone as functional as a landline."

As an ISO 9001 2000 certified company, CellAntenna continues to provide cutting edge technology and maintain its leadership position in the cellular communication enhancement industry worldwide.

About CellAntenna

Headquartered in Coral Springs, Florida, and offices in England and Poland, CellAntenna has more than 90,000 customers worldwide. CellAntenna has grown from a prominent Florida based corporation to a firm of international standing. Nowadays, it also cooperates worldwide with governmental institutions, the army and public services providing them the guarantee of perfect communication in case of emergency. This cooperation also concerns jamming of GSM signal. This technology is especially useful to fight organized crime and sophisticated terrorist actions. It is only available for authorized commercial customers.
