Press release from: [Quester](#)

OLfolders for Outlook enables the access and sharing of all Outlook data such as contacts, calendars, tasks, emails stored on a different computer from each workstation simultaneously in a given network, a central enterprise wide access to an Outlook structure is possible. The server application OLfoldersServer is installed on at least one computer in a new or given Outlook network, allowing other clients to connect to the data remotely. Access can be restricted by user rights to certain profiles, files or folders inside a file. The server can run either on a dedicated server or on any works station or notebook; more than one server can be installed in a network. Starting from 2 up to unlimited clients can connect to data stored on the OLfoldersServer. OLfolders can co-exist perfectly in an existing MS Exchange environment, for example to create additional public folders for a group or project and without loosing the connection to Microsofts Exchange Server. For offline access, data can be replicated using our add-on QSynchroization a synchronisation program for Notebooks. An integrated mail server handles the internal and external mail transport. OLfolders supports the extended safety technologies of Windows XP Service Pack 2. OLfolders, OLfolders PE, QSynchroization, QMailFilter, QSearchFolders, OLfax, QNewsLetter as well as QSyncFTP for the automatic publishing of your web site to any FTP server offers an economical and industries independent Outlook and Windows total conception for small and medium-size enterprises which set on economical and fast IT solutions which can be administered easily. Currently - about 15,000 users in more than 1,000 companies world-wide are using OLfolders for Outlook networks.

Headquartered in Hamburg, Germany - Quester is a leading provider of small and medium-sized enterprise (SME) communications solutions for Microsoft Outlook networks. In the year 2000 the idea for the product "OLfolders" was born. Quester is the origin- and Development Company of this internationally unique GroupWare product for Outlook networks. Since its beginning of 2001, the vision - "The Network for MS Outlook" - has propelled Quester to its position as a leading manufacturer of products, technologies, software and services that make the "Network computing" for enterprise-far communication in small and middle Outlook networks. At present world-wide already more than 15,000 Outlook users in over 1,000 enterprises work with OLfolders for Outlook networks.
